Objective:

This client-side web development project aims to design and build a fully functional and visually appealing fitness website named *Power Fitness Club*. The site is aimed at users interested in health and fitness and provides features such as service overviews, fitness programs, meal planning tools, motivational content, and a shopping section for fitness products.

Interactive tools like a BMI calculator, calorie calculator, and fitness journal help support users in tracking and achieving their fitness goals. The design focuses on creating a clean, modern, and motivating atmosphere while keeping usability and accessibility at the forefront. A user centered approach ensures that navigation is clear and intuitive across different devices.

Site Layout and Navigation

A consistent layout is maintained across all pages to support a smooth user experience. The website features a fixed header and a responsive navigation bar, giving users constant access to all major sections regardless of scroll position.

Navigation includes the following pages:

- **Home Page** – Highlights the club's purpose, previews available programs, includes a BMI calculator, and provides a direct call to action. The BMI Calculator uses a basic formula: $BMI = \text{weight (kg)} \div [\text{height (m)}]^2$. You type in your weight and height, and the calculator gives you your BMI number. It also tells you if you're underweight, normal weight, overweight, or obese. The results are shown clearly so you can easily understand your current weight status.
- **Program Page** – Displays a list of fitness programs with pricing details and filter options for easier browsing.
- **Meal Plan Page** – Offers meal plans tailored to various goals, along with a calorie calculator and planning advice.
- **Journal Page** – Enables users to log workouts, meals, and mood entries for daily tracking.
- **Motivation Page** – Showcases motivational quotes and content to help users stay inspired.

- **Shop Page** – Recommends external shops for fitness gear and essentials.
- **Contact us page** -Allows users to contact us
- **About Us page** – Describes the developers
- **Bibliography page** – Contains the links we used for our research

For mobile users, a hamburger menu ensures easy navigation and seamless interaction across different screen sizes.

Color Scheme and Typography:

The visual theme uses colors that are fresh, positive, and energy-driven, without feeling overwhelming or intense.

Primary colors include:

- primary: #fb9fba;
- primary-dark: #e57c9b;
- primary-light: #ffcee0;
- secondary: #a0d9ef;
- secondary-dark: #75c2e6;
- tertiary: #b6e2d3;
- tertiary-dark: #8fd0bb;
- accent: #ffd166;
- purple: #d9c3e7;
- dark: #6b6b6b;
- light: #fff9fb;
- gray: #a5a5a5;
- light-gray: #f3f3f3;

These colors help create a light, motivating feel throughout the site.

The font choices Poppins and Quicks and contribute to a modern and approachable

aesthetic. Headings are designed to be bold and attention-grabbing, while paragraph text remains clean and legible, reinforcing the overall tone of encouragement and clarity.

Visual Effects and Interactivity

Subtle animations and effects are integrated throughout the site to make interactions feel responsive and engaging, while still keeping performance and user experience in mind.

Interactive features include:

- **Fade-in animations** for sections and cards as users scroll.
- **Hover effects** on clickable elements to provide feedback and highlight interactivity.
- **JavaScript-based form functionality** for the BMI and calorie calculators, with built-in validation for user inputs.
- **Dynamic filters** on the Program and Meal Plan pages to help users tailor content to their goals.
- **Sticky navigation bar** for easy movement between pages without needing to scroll to the top.

All interactive elements are implemented to support the main content and improve usability, without distracting from the site's purpose.

Review

Working on our group project to create a fitness club website was quite enjoyable. Working as a group of three was manageable as we worked closely together throughout the process. Rather than assigning individual roles, we chose to collaborate on all parts of the project. This allowed us to learn from one another and support each other equally with HTML, CSS, and JavaScript.

One of the biggest challenges we faced was the distance between us, which made it difficult to meet in person regularly. However, we overcame this by making time for occasional meet-ups and using Google Meet to stay connected and coordinate our progress. These online meetings were very helpful for sharing ideas, solving problems together, and keeping each other motivated.

Overall, we were very proud of the website we created. The final result was visually appealing, functional, and reflected the goals we set out to achieve. The experience helped us improve both our technical skills and our ability to work as a team. It was rewarding to see how our collaboration turned into a successful project.
